

Care and Maintenance of AQUA BELTS

The belts are quite durable, but not indestructible.

Following are tips for proper care:

 **Wear the belts properly:** When the belts are 'in use' the strap portion of the belt must be on the outside, (the belt should look like a circle, not a horseshoe.) When the belt is worn improperly, the strap will rip through the reinforced foam.

 **Store the belts properly:** When the belt is not in use, hang up the belt in a warm environment for storage. The belt is very sensitive to the cold and will crack at the slightest bend when cold. Allow the belts to achieve room temperature before bending them. Leaving unused belts on a wet deck for extended periods of time and allowing them to dry in that environment will shorten the life of your aqua belts.

 Ensure the right size belt is being used. Using a belt that is too small could result in the belt ripping. The belt should fit as shown in the pictures to the right. Most damage to belts is due to people using a belt that is too small.

Belt Description

 The belts shown in the pictures are available through CALA. Details are available on the Merchandise page on the CALA web www.calainc.org

 Red vinyl coating, dense cross-linked polyethylene foam, same width from front to back, clip in strap easily adjustable to fit snugly, easy and cost-effective to replace straps, come in m-l-xl sizes

Warning

 These belts are not approved life saving devices
